

Viableo — Final 10/10 Product + Ux + Functionality + Production Qa

Repository: <https://github.com/witejackel-eng/automation-roi> | Current deployment: <https://automation-roi-delta.vercel.app/>

ROLES

- Principal Product Designer - Senior UX/UI Designer - Design Systems Architect - Senior React/Next.js Engineer - Interaction Designer - Accessibility Engineer - SEO Engineer - Performance Engineer - QA Engineer - Product Manager - Conversion Designer - Production Release Engineer

TASK OBJECTIVE

Take the existing Viableo product from its current excellent state to a true 10/10 production experience. Preserve what is already excellent, improve what is merely good, fix anything broken, strengthen Viableo's unique identity, and verify every important function before declaring the work complete. The final result must feel like a finished premium product rather than a polished prototype.

FINAL DESIGN NORTH STAR

The finished Viableo should feel like: a financial instrument disguised as a beautiful product.

The user's mental journey should be: “I have an automation idea.” → “Let's quantify it.” → “Let's test the assumptions.” → “Let's see whether it survives stress.” → “Viableo gives me a verdict.” → “Now I can take that decision to the client.”

Objective: make the existing product clearer, more distinctive, more trustworthy, more responsive, more functional, and more finished; and make Viableo feel like a product category of its own.
